

## Leda Health - Sexual Assault Survivor Survey

Plot 1:

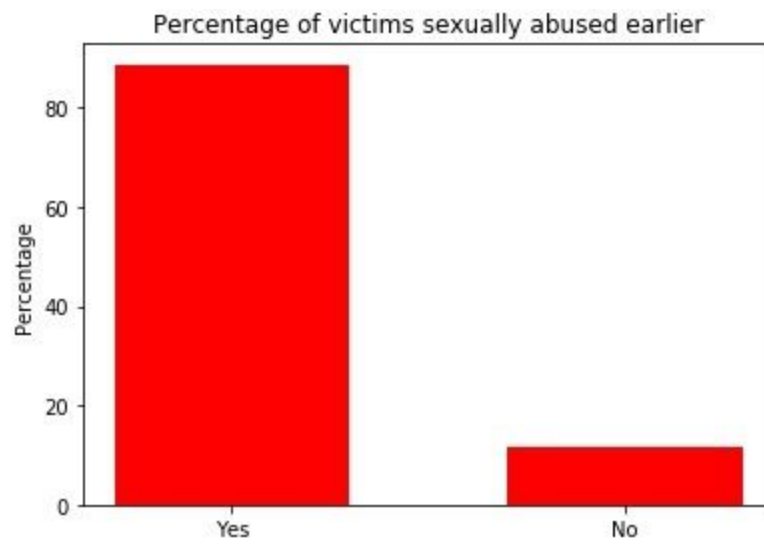

In the chart 1, it is evident that older people are more likely to report the sexual assault as compared to others. In age bracket of 45-54, more than 30% of people have reported.

Plot 2:

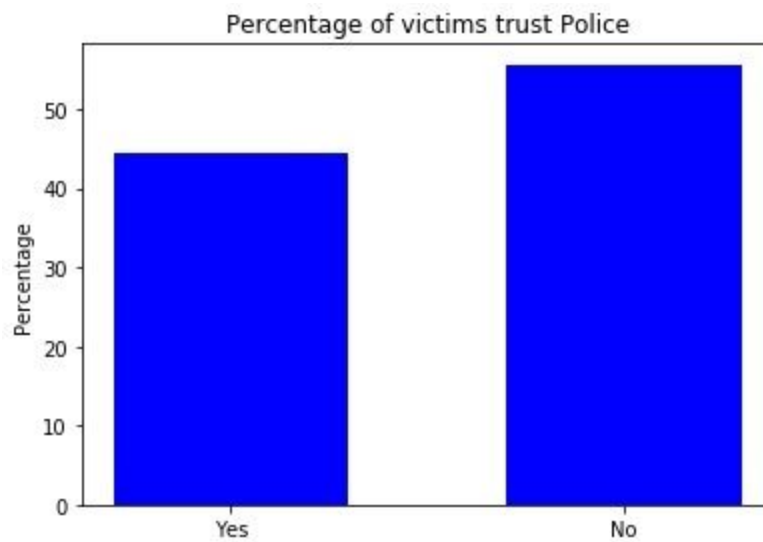

In chart 2, it can be observed that people with age 75 or older, wants covid 19 patients to be prioritized. However, the data of such victims are very less, so it can be ignored for further analysis.

**Plot 3:**

The above plot depicts the percentage of victims who were sexually abused earlier as well.

**Plot 4:**

The above plot depicts about the percentage of sexual assault victims who trust the police which is lesser than who don't.
